

HydroFoamer

Lightweight, hand held foam sprayer for simple and convenient foam cleaning. Perfect for when only a small unit will do

Use a HydroFoamer to produce a wet rich foam for longer soak time. It offers easy automatic dilution with convenient control of where and how solution is applied. On and off functions are at your fingertips through a trigger control on the spray nozzle.

HydroFoamers eliminate the time and difficulty of manually mixing concentrates – increasing labour productivity and concentrate performance because the solutions are consistently mixed. Concentrates are only mixed as they're applied, so are fresh and will perform at peak power to ensure minimal waste.

HydroFoamer is often used in commercial kitchens, animal houses and small car cleaning services, among others.

With a wide range of applications, this product is a popular choice!

Features & Benefits

- Lightweight handy unit
- Generates wet foam giving a better coverage
- Time-proven and reliable components
- Non-electric
- No installation required
- Compact and easy to store
- Exceptional safety standards
